SUMMARY

Full-stack engineer with a **Go** backend core and **React / Vue / TypeScript** front ends. Currently building payments and compliance for Zolvat EMI: QR acquiring, open banking, card issuing and a 70+ rule AML engine. Delivered end-to-end products across fintech, energy, travel, healthcare and cloud infrastructure: APIs, payments, authentication, dashboards and AWS serverless deployments. Works remotely and asynchronously with full overlap with European working hours.

SKILLS

Backend: Go (Gin, GORM, net/http, gRPC, goroutines & channels), REST/JSON APIs, event-driven & serverless architecture, NestJS (Node.js), Java (Spring Boot)

Frontend: React, Next.js, Vue 3, Nuxt, TypeScript, JavaScript, Tailwind CSS, Vite, Flutter

Data & messaging: PostgreSQL, Redis, DynamoDB, MySQL, MongoDB, Kafka, RabbitMQ, NATS

Cloud & DevOps: AWS (Lambda, DynamoDB, CDK), Google Cloud, Docker, Kubernetes, GitHub Actions, Jenkins, Git

Domain: Fintech (AML, sanctions, QR acquiring, open banking, card issuing), payments, cloud infrastructure, e-commerce, energy

WORK EXPERIENCE

Full Stack Golang Developer & Assistant Team Lead (Mobile) | Jul 2025 – Present
Modular Fintech · Zolvat EMI

- Built payments and compliance features for **Zolvat EMI** end to end: **Go** (Gin, GORM/pgx, PostgreSQL, Redis) backend with a **Vue 3 + TypeScript** (Pinia) frontend.
- Designed the transaction-monitoring **rule engine**: **70+ AML rules** (sanctions, geographic risk, velocity, suspicious activity) with risk scoring that decides whether to **reject, flag for review, or take no action**; plus sanctions screening against **15 lists** (EU, OFAC, FATF).
- Built **QR acquiring and A2A payments** and the **merchant workspace**: onboarding, request-to-pay, order-bound QR sessions, checkout, catalogue, staff roles, terminals, reconciliation and payouts.
- Integrated **open banking** (Yapily, Revolut Open Business API) for external transfers and request-to-pay, built a recurring-payment (PIS) engine, and built **Walletto virtual card issuing**.
- Built a crypto-compliance prototype (Go + Vue: Kraken, Slither smart-contract scanning, multi-chain checks) and Flutter mobile flows (send/request money, payment links, QR).
- Wrote 53 Go test files (testify) and frontend tests (Vitest, Playwright).

Software Engineer (Contract) & Team Lead (ZumaOS) | Cofikra Feb 2025 – Aug 2026

- Built a computing e-commerce storefront end to end: Go/Gin REST APIs for catalogue, accounts and orders, plus a Vue 3 + TypeScript + Tailwind front end.
- Implemented authentication, authorisation, cart and order flows and store-administration tools; built the ZumaOS product website.

Software Developer | Ghogl 2025

- Built serverless **Go on AWS Lambda** services with DynamoDB and AWS CDK, plus **React** internal apps for equipment monitoring, maintenance, environmental compliance and incident reporting.
- Built real-time dashboards of offshore rig sensor data using DynamoDB Streams and Lambda triggers.
- Automated infrastructure with CDK and hardened event-driven pipelines, **reducing downtime by 30%**.

Software Developer | Sifon 360 (UK) 2024

- Built Go JSON APIs with Redis caching and real-time data sync for a discovery app (housing, religious centres, libraries, sports facilities).

Software Developer | Agit Solutions NG 2022

- Built full-stack applications (Java/Spring Boot, PHP, React) for NGO case management, events and beneficiary tracking; mentored junior developers.

SELECTED PROJECTS

ServAfri – Cloud platform · *Client project · Go, PostgreSQL, Next.js* michaelshekwolo.com/projects/servafri

- Cloud console for virtual machines, networking, usage costs, billing, team access and browser-based terminals.

Aebello – Travel eSIM platform · *Go, PostgreSQL, Nuxt, Vue* michaelshekwolo.com/projects/aebello

- Destination search and plan comparison; checkout and payment confirmation wired to eSIM provisioning and delivery.

Dhylapse – Pharmacy inventory platform · *Go, PostgreSQL, React* michaelshekwolo.com/projects/dhylapse

- Batch-level stock and expiry tracking with alerts, multi-pharmacy workspaces, staff access and inventory ledgers.

Phoenix Creed Energy · *Client project · Go, PostgreSQL, Next.js, Flutter* michaelshekwolo.com/projects/pce

- Web and business apps, a sales CRM, and mobile flows for EV charging, wallets and transaction history.

Redd – Real estate platform · *Client project · Go, Gin, PostgreSQL, Vue 3* michaelshekwolo.com/projects/redd

- Listings, document access, messaging, notifications, and client and admin interfaces.

EDUCATION & CERTIFICATIONS

BSc Computer Science | Lincoln University Malaysia 2024

Advanced Diploma, Software Engineering | Aptech Computer Education 2023

Certifications & courses: Build Go Apps That Scale on AWS, Basics of Go, Introduction to Next.js v3 (Frontend Masters, 2024–25) · Meta Introduction to Front-End Development (Coursera, 2022) · Postman API Fundamentals Student Expert (2024)
